

Subject index

© 2004 The Biochemical Society

- ACE (*see* angiotensin-converting enzyme)
acetylcholine, 68, 123, 126, 127
aconitase, 207
aging, 203–213
Akt, 148
alkenal, 208–211
Alzheimer's disease, 189
amino acid transporter, 144–146
AMP-activated protein kinase, 148
angiotensin II, 124
angiotensin-converting enzyme, 124, 128
antioxidant, 157–176
antioxidant-responsive element, 109, 111, 161–168
apoptosis, 97, 98, 103, 104
APX (*see* ascorbate peroxidase)
ARE (*see* antioxidant-responsive element)
L-arginine, 109, 124, 144, 145, 146–148
ascorbate (*see also* vitamin C), 30, 31, 33, 34, 103, 104
ascorbate peroxidase, 27–38
atorvastatin, 128
- Bach1, 180, 181
BH₄ (*see* tetrahydrobiopterin)
bilirubin, 178, 179, 180, 181, 182–189
biliverdin, 180, 182–188
biliverdin reductase, 181
brown adipose tissue, 205
- Ca²⁺-ATPase, 148
Caenorhabditis elegans, 89–92, 167, 168, 169
calcium, 144, 148
calmodulin, 144, 148
cancer, 98, 105
cap 'n' collar transcription factor, 157, 161–168
carbon-centred radical, 209
carbon monoxide, 178, 179, 180
carcinogenesis, 105
cardiovascular dysfunction, 188–189
cardiovascular risk factor, 123
caspase, 98, 104, 105
catalysis, 27–38
catalytic cycle, 46–47
cationic amino acid transporter, 144–146
caveolae, 146
caveolin-1, 148
CD95, 98, 104
cell signalling, 108, 158, 160
cerivastatin, 128
cGMP, 51
chelation, 198
CNC transcription factor (*see* cap 'n' collar transcription factor)
cofactor, 18–20, 124, 125, 130, 144
Complex I, 114
Compound I, 29, 31, 32, 100, 101, 102, 104
Compound II, 100
conformational change, 2
conformational sampling, 13
copper, 16, 193–199
cytochrome c, 97–106
cytochrome c oxidase, 76, 77, 78
cytochrome c peroxidase, 28, 35–36
- DAF-2-DA (*see* 4,5-diaminofluorescein diacetate)
Danio rerio, 166
DCF (*see* 2',7'-dichlorofluorescein)
DCFH₂ (*see* 2',7'-dichlorofluorescein)
15-deoxyprostaglandin J₂, 111
diabetes, 151–153
4,5-diaminofluorescein diacetate, 73, 74
2',7'-dichlorofluorescein, 97, 99, 100, 103
2',7'-dichlorofluorescein, 99, 101, 102, 103
5,5-dimethyl-1-pyrroline N-oxide, 101, 102
disulphide, 99, 102, 103, 104
DMPO (*see* 5,5-dimethyl-1-pyrroline N-oxide)
DNA microarray, 168–172
doppel, 198–199
Drosophila melanogaster, 68, 69, 167, 168, 169
Duox family, 85–96
- electron transfer, 2, 4–9
electron-transferring flavoprotein, 1–14
endothelial dysfunction, 122, 126–130

- endothelial nitric oxide synthase
(*see also* nitric oxide synthase), 109,
122, 144, 148–153
- EPR, 100, 101
- ESR, 196
- FAD, 144
- Fas, 98, 104
- firefly, 75–78
- fluorescent probe, 73, 74, 97, 99, 100, 101,
102, 103
- FMN, 144
- fruitfly (*see Drosophila melanogaster*)
- Fusarium graminearum*, 16
- galactase oxidase, 15–25
- D-galactose, 16
- GC (*see* guanylate cyclase)
- Gerstmann–Straussler–Scheinker
syndrome, 199
- Gilbert's syndrome, 188
- glutamate cysteine ligase, 162
- glutathione (*see also* GSH), 98, 102–104,
159, 162
- glutathione peroxidase, 66, 99, 103, 104
- glutathione radical, 103, 105
- glutathione reductase, 66, 99
- GO (*see* galactase oxidase)
- gp91, 86
- GSH (*see also* glutathione), 99, 102, 103,
104, 105
- GSSG (*see* disulphide)
- guanylate cyclase (guanylyl cyclase),
51–63, 68, 144
- haem, 36, 56, 144
- catabolism, 179–182
- synthesis, 180
- haem-dioxy intermediate, 42
- haemin, 184, 185
- haem–nitric oxide product, 45
- haemoglobin, 135–142
- haem oxygenase-1, 177–192
- H₄B (*see* tetrahydrobiopterin)
- heat-shock protein, 148, 171
- Hill coefficient, 195
- hydrogen peroxide, 90, 97–106, 108, 113,
114, 181, 182, 183
- hydroxynonenal, 209, 210, 211
- hydroxyl radical, 97, 101, 104, 204
- hyperbilirubinaemia, 188
- hypercholesterolaemia, 125
- inducible nitric oxide synthase (*see also*
nitric oxide synthase), 109, 144, 146
- inflammation, 135, 139
- insulin, 150
- Keap1, 164, 165, 166–168
- kinase (*see* protein kinase)
- lipid oxidation, 111
- lipid peroxidation, 204
- Manduca*, 69–75
- MAPK (*see* mitogen-activated protein
kinase)
- memory, 69
- metamorphosis, 71
- microarray, 168–172
- mitochondria, 65, 97, 98, 99, 110,
113–116, 184, 203–213
- mitogen-activated protein kinase, 109,
150–151
- Mn-superoxide dismutase, 113
- motoneuron, 71
- myoglobin, 179
- NADPH, 171, 181
- NADPH oxidase, 86, 87, 88, 93, 94, 124,
126, 128
- nematode (*see Caenorhabditis elegans*)
- neuronal nitric oxide synthase (*see also*
nitric oxide synthase), 54, 144
- NF- κ B (*see* nuclear factor κ B)
- nitric oxide, 41, 45–47, 51–63, 69, 73, 74,
99, 104, 105, 108, 113, 122, 136–139,
144, 180, 186, 187
- nitric oxide receptor, 51
- nitric oxide synthase, 39–49, 54, 66, 108,
109, 122, 124, 125, 130, 144, 146,
148–153
- nitroglycerin, 51, 126, 129–130
- nitrosative stress (*see* stress)
- NMDA receptor (*see* N-methyl-D-
aspartate receptor)
- N-methyl-D-aspartate receptor, 54, 111
- NO (*see* nitric oxide)
- NOS (*see* nitric oxide synthase)
- Nox family, 85–96
- Nrf (*see* nuclear factor-erythroid 2
p45-related factor)
- nuclear factor κ B, 114
- nuclear factor-erythroid 2 p45-related
factor, 161, 162, 163, 164–166
- 17 β -oestradiol, 150
- oxidative stress (*see* stress)
- oxygen activation, 42–43
- PDZ domain, 54, 55
- peroxidase, 27, 28, 97–106
- peroxiredoxin, 172
- peroxisome proliferator-activated
receptor- γ , 109, 111

- peroxynitrite, 110, 122, 125
photocyte, 75, 76, 77, 78
Phox, 86
post-synaptic density protein-95, 54
post-translational modification, 172
PPAR- γ (*see* peroxisome proliferator-activated receptor- γ)
pre-eclampsia, 151–153
prion, 193–202
protein kinase, 109, 148, 150–151
proteomics, 168–172
PSD-95 (*see* post-synaptic density protein-95)
- Q-cycle, 99
- reactive nitrogen species, 108–111, 112, 113–116, 121–133, 185
reactive oxygen species, 65, 86, 88, 89, 108–111, 112, 113–116, 121–133, 158–159, 204–206
receptor-mediated signalling, 113
recognition loop, 2, 3
redox potential, 4, 102, 103, 104
redox regulation, 97
redox signalling pathway, 113, 115
reduction potential (*see* redox potential)
respiration, 113
RNS (*see* reactive nitrogen species)
ROS (*see* reactive oxygen species)
- sGC (*see* guanylate cyclase)
shear stress (*see* stress)
signal transduction, 108, 158, 160
SKN-1, 167
S-nitrosation, 110
SOD (*see* superoxide dismutase)
statin, 128
stopped-flow kinetics, 4–9
- stress
 nitrosative, 185, 186–187
 oxidative, 99, 104, 182–184, 185
 response, 157–176
 hear, 150
substrate specificity, 27–38
superoxide, 97–100, 104, 105, 108, 122, 123–126, 203–213
superoxide dismutase, 99, 109, 110, 113, 158–159, 194, 198
- tetrahydrobiopterin, 41, 42–47, 124, 125, 130, 144
thioether bond, 19, 22, 23
thiol-reactive agent, 159
thioredoxin reductase, 66
TMADH (*see* trimethylamine dehydrogenase)
trachea, 76
trimethylamine dehydrogenase, 1–14
tumour cell, 97, 105
tumour promoter, 105
tyrosine, 101
tyrosyl radical, 97, 100, 101, 102
- ubiquinone, 206, 207
ubisemiquinone radical, 99
uncoupling protein, 203–213
- vascular function, 135–142
vascular pathology, 138–139
vitamin C (*see also* ascorbate), 127, 128–129
vitamin E, 128–129
- xanthine oxidase, 123, 126
- YC-1, 55–56, 58
- zebrafish (*see* *Danio rerio*)
